Protection Agency

MEMORANDUM

TO: Denise M. Webster, Registration Specialist
Pesticide Registration Branch **HSM-01024**

FROM: Michael H. Dong, Ph.D., CNS, DABT, Staff Toxicologist
Worker Health and Safety Branch
(916) 445-4263

DATE: February 9, 2001

SUBJECT: **CORRECTION:** INSIGNIFICANT EXPOSURE ASSESSMENT FOR
TERRAZOLE®

This note is to correct the mathematical typographical error made in the above review dated October 27, 2000, regarding the calculation of the lifetime average daily dosage (LADD). **Although the implications and the conclusions remain the same, the calculated LADD should have been 0.004 µg/kg/day, not 0.008 µg/kg/day.**

In the October review, the absorbed daily dosage (ADD) of 0.22 µg/kg/day as calculated was intended to be for *maximum* daily exposure. This maximum ADD was based on the maximum treatment rate of 30 potted plants per minute (i.e., 1 potted plant in every 2 seconds). However, the *average* ADD (AADD) should have been based on the professional estimate of 15 potted plants per minute; that is, at half of the maximum treatment rate. The LADD from this SNL label use hence should be 0.004 µg/kg/day [= (0.11 µg/kg/day AADD) x (24 days/365 days) x (40 occupational years/75 lifetime years)].

Please attach this correction to the October review, and make a copy of this note available to those who already received the review.
